### Preface

This is the fifth regional profile prepared by the Department of Regional and Community Affairs. It is hoped that the statistical data and brief analysis will assist communities in assessing their strengths, weaknesses, and potentials. It is also hoped that these profiles will fortify the concept of planning and working together on a regional basis.

The U.S. Bureau of Census, with its variety of documents, has served as one of the major basic sources for this profile. It should be recognized, however, that census data can reflect only a general and somewhat limited measure of the occurrences in a region. Census data at ten year intervals cannot reflect the highest or lowest levels within that time span.

All tables have been prepared by the Department of Regional and Community Affairs of the University of Missouri-Columbia and are documented by sources and dates.

There are 20 regional planning districts in the State of Missouri. The Missouri Department of Community Affairs, Jefferson City, acts as a link between the regional planning districts and federal and state supportive agencies.

The Mid-Missouri Regional Planning Commission Office is located at 830 East High Street, Jefferson City, Missouri 65101.

This profile was prepared under the editorship of Hugh Denney, Professor, Department of Regional and Community Affairs, University of Missouri-Columbia.

*Note:* Table and Figure numbers in this publication are keyed to a departmental file for convenience in reference and ordering. Some numbers are skipped in this publication but those included are in sequence and located near the text references to them.

### Mid-Missouri Regional Profile

Community Development Specialists Paul Lutz, Ralph Utermoehlen

### **Area Description and History**

by W. Francis English and Priscilla Evans

Defying generalized interpretations of its regional development, the eight-county Mid-Missouri Region exhibits diversity and discontinuity in its historical heritage. Within the 4,800 square mile section, regional cohesion is fractured by geographic differences, diverse economic interests, diffuse political affiliations, and by two distinct cultural traditions. Various parts of the region are known as the Boonslick country, Little Dixie, and Callaway county, since the Civil War, has tenaciously remained the Kingdom of Callaway, reflecting the fragmentation of development in the area and the diverse perceptions of what each county's relationship is to the other and what the whole region's relationship is to the rest of the State. This diversity has stimulated the formation of smaller, fluid regions which have been structured along similar cultural, economic, and political interests. It is within these sub-regions that one finds the unifying themes and continuity of development.

Cutting through the heart of the region, the Missouri River marks a transition zone between the distinct geographic and cultural areas which exist north and south of the River. The River forms the southern boundaries of Callaway, Boone, and Howard counties while being the northern boundary of Osage, Cole, Moniteau, and Cooper counties. Audrain county, situated in the northeast portion of the region and bounded by seven counties, mirrors the geographic discontinuity within the region.

### River Divides Prairie and Hill Regions

The Missouri River also draws the line between the loessial prairie soils, which characterize northern Missouri, and the loessial-covered hills and light-colored, stony soils of the central Ozarks, which characterize large portions of south-central Missouri.

A strip of bottomland and a band of hill land, commonly known as the "river hills," provide the only geographic unity to the counties north and south of the River. This extremely fertile strip of bottomland soil, which is one to ten miles in width, runs along either side of the River. Intensive cultivation of this soil reaps some of the highest crop yields in the State. The band of hill land paralleling this bottomland strip, on both sides of the River, is some five to 20 miles in width. This hill soil is brown in color to silty in texture and of good fertility.

However, the terrain is hilly to steep and subject to severe soil erosion. Thus, the topography inhibits maximum cultivation of this fertile band of hill land.

### Parts Are Badly Eroded

Once north and south of this area, the Mid-Missouri Region loses its geographic unity. A badly eroded zone of loessial soil is adjacent to this band of hill land north of the river and extends through the center of Callaway and Boone counties and through the northeastern corner of Howard county. Numerous gullies interrupt the rolling to steep terrain which is primarily used for timber and pasture. The remainder of Howard county consists of the most fertile and the most damaged soil area in the State; the wind-blown loessial deposits, ranging some 20 to 100 feet in depth, are more conducive to a wider range of crop adaptations than any other soil area. Unfortunately, due to its location adjacent to the river floodplain and the fine texture of the soil, erosion hinders maximum cultivation. The northern sections of Boone and Callaway counties and all of Audrain county are characterized by black prairie loam underlain with hardpan soil. The high quality of the native grasses and the utilization of proper farming practices make this area extremely suitable for agricultural and livestock production.

The topography adjacent to the band of hills in the counties south of the Missouri River is hilly to gently rolling. Though a deep soil mantle covers the ridges and valleys, numerous rock outcrops and severe soil erosion create obstacles for efficient agricultural production. Through-

COUNTY ORGANIZATION DATES AND ORIGINAL AND PRESENT

County	Date	Organized	Original County Seat	Present County Seat
Audrain	Dec.	17,1836	Mexico	Mexico
Boone	Nov.	16,1820	Smithton	Columbia
Callaway	Nov.	25,1820	Elizabeth	Fulton
Cole	Nov.	16,1820	Marion	Jefferson City
Cooper	Dec.	17,1818	Boonville	Boonville
Howard	Jan.	13,1816	Old Franklin	Fayette
Moniteau	Feb.	14,1845	California	California
Osage	Jan.	29,1841	Linnville	Linn

out the area improved farm land is interspersed with forests. The southeastern corner of Cooper and the southwestern corner of Moniteau are the only portions of the four counties south of the River to have an extensive section of prairie soils. Similar conditions prevail in this area to the prairie land of northern Boone and Callaway counties. These topographic and soil characteristics create environmental limitations which help structure economic institutions, which, in turn, influence the patterns of cultural and political development within the region.

### River Was Early Settler's Highway

With the Missouri River meandering through seven of the counties and with the numerous smaller, navigable rivers, such as the Osage, Gasconade, and Maries draining into it, trappers, traders, and settlers found the area relatively accessible by a cheap and dependable mode of transportation. Penetrating the region in the last half of the 1700s, trappers and traders placed the region among the earliest explored and settled territory in the Louisiana Purchase. Prior to the Louisiana Purchase, in 1803, the Spanish and French occupations primarily concerned themselves with exploitation of fur-bearing animals, controlling the Indian trade, and manufacturing the salt derived from the numerous salt springs in the area. With the encroachment of the American trapper and trader in the 1790s, conflicts developed among the different nationalities for control over these economic adventures.

After acquiring the territory, the United States Government began to survey the region, declared it Indian Territory, and forbade settlers to homestead in the area. The government did grant licenses to those who wanted to trap, trade, or manufacture salt. The fur trappers and traders quickly depleted the population of fur-bearing animals and moved on to regions where fresh sources of furs could be found. A few, such as William Ashley, would later return to the region to either speculate in land or settle. Nathan and Daniel Boone, sons of the legendary Daniel Boone, manufactured salt at what became known as Boone's lick in Howard county and, as early as 1807, shipped their product by flatboats to St. Louis. Nathan would later return to help survey for the Booneslick Road which in 1815 was the only road connecting this region with the St. Charles and St. Louis districts.

### Little Permanent Settlement Before 1808

Economic enterprises and, certainly, to some extent the romantic spirit of adventure motivated these frontier mercantile capitalists; the drive for permanent settlement was not a major incentive for immigration into the area until after 1808.

The native Indian population further deterred settlement in the region. Though the number of Indians in the area was relatively small, numerous bands and loosely organized tribes of Osage, Pottawatomies, Sacs, Foxes, Iowas, and Kickappoos lived in villages scattered along the waterways. They were semi-nomadic; their hunting

grounds incorporated several thousands of square miles. A life-style which included periodically shifting villages, subsistence farming, and hunting and gathering necessitated large amounts of space; it also brought many of these bands and tribes into conflict with each other. Seldom comprehending or appreciating the complexity of such a culture, the Americans perceived that much of the land was going to waste and that the Indian only needed immediate possession of the land on which his village was located. They argued that however unfortunate it was, it remained necessary for less advanced cultures to bow to the dominance of a superior civilization.

### Influx From Kentucky, Virginia, Tennessee

Despite restrictions on settlement and government orders to remove all squatters, people infiltrated the region in small numbers from 1808 to 1812. The War of 1812 and the British ability to turn Indian discontent into raids on American settlements halted this first influx of immigrants.

After the War of 1812 and with the start of treaty negotiations with the Indians, a large influx of immigrants moved into the area. This was between 1816 and 1820. These people, coming primarily from Kentucky, Tennessee, Virginia, and the St. Charles district of Missouri, rapidly took up the most productive land. A major movement toward settlement did not occur in Moniteau and Osage counties until the 1840s and 1850s. This 1816 wave of immigrants included an influential number of wealthy families from Madison County, Kentucky, who were well-educated, who worked in professional occupations, and who quickly filled the vacuum of economic, political, and social leadership.

With this preponderance of southern influence, the majority of these counties aligned themselves with the attitudes, values, and goals of the antebellum South. This posture eventually earned the counties north of the Missouri River the nickname of Little Dixie. The same southern proclivities were present south of the River but a large influx of foreign immigrants, especially Catholic Germans and Irish, into Osage, Cole, and Moniteau counties in the 1840s tempered the pervasive southern influence. Nevertheless, the counties south of the Missouri did remain on the fringe of Little Dixie when it came to politics and economics.

### Wielded Political Power

The commercial and professional classes of the counties north of the Missouri River wielded considerable political power and virtually controlled Missouri politics. In the early statehood period, political membership was based more on national than local issues, and reflected temporary alliances rather than any strong, two-party system. Generally, the Mid-Missouri Region supported the Democratic Party; but, the counties south of the

River, where larger numbers of foreign peoples lived, fluctuated in their political alliances. Men such as Abiel Leonard and James Rollins could exert much political leverage for numerous reasons. Many of the southern immigrants had previous political experience in the state from which they emigrated and their wealth enabled them to spend more time with civic concerns and also served as a weapon to gain more political power.

Once populated, the region quickly passed through the subsistence economy of the frontier to a market economy of a more complex community which produced a surplus of goods and profited from their trade. Land speculation and agriculture provided the foundations for much of the wealth. River towns, such as Franklin and Boonville, became centers of trade and government agencies. As early as 1818, flatboats were carrying corn to St. Louis. At the same time, the first public land sales west of St. Louis took place in Franklin. Franklin eventually ranked in importance with St. Louis and Ste. Genevieve in economic and political influence. The Boonslick Country soon became a jumping-off place for settlers venturing into other parts of the State. By 1830, the Boonslick area could boast of a relatively stable society which was not only characterized by this group of powerful politicians, influential professionals, wealthy speculators, and merchants, but also by this groups' desire to emulate the southern culture.

### Slavery Entered the Region

In the attempt to recreate the southern plantation system, the institution of slavery and the accompanying racism embedded itself in the region. Howard, Boone, and Callaway counties ranked among the top five slave counties in the State; the densest slave population in the State existed in Howard county. Hemp, a leading export of the region, and tobacco, of lesser significance, encouraged slavery as an economic system.

To assume that slavery and the intense conservatism of the region stopped progressive innovations is a deception. Experimentation in new farming techniques and improved breeding of livestock extended this region's sphere of influence into the Ohio Valley, the Southwest and the High Plains regions of the United States. Farmers turned to more diversified crop production, and cattlemen, such as Leonard, imported shorthorns and Scotch polled cattle from Britain and jacks and jennets from Spain. Cattle ranchers in Texas, Wyoming, Oregon, and Colorado sought out the cattle from this area to up-grade their own herds. The information collected from this experimentation came to be distributed at the county fairs. Boone County held Missouri's first agricultural fair as early as 1835.

This diversification of agricultural production, the increasing concentration of capital in the livestock industry, and the commercialization of business enter-

prises lessened the impact of slavery on the economy and was a significant factor in preventing the plantation labor system from fully developing. In addition to this, the political might of the Mid-Missouri politicians was on the wane. As long as financial issues were paramount, they could maintain a semblance of solidarity. Once the issues of slavery and secession from the Union entered the political arena, this already loosely defined and loosely structured political alliance splintered.

### Majority Opposed Separation From Union

These issues created bitter divisions within the region. As a whole, the majority staunchly opposed separation from the Union. Disagreement emerged over the right of the Federal government to infringe upon the privileges and responsibilities of the state governments. The southern cultural traditions and the prevalent slave institution influenced the strong Confederate sympathies in counties such as Callaway, Howard, and Boone; many from these counties left to join the Confederate army or formed home protection units on their own. As late in the war as 1864, slaves were still being sold in Boone and Howard counties. In the counties south of the Missouri River, the larger proportion of immigrants from foreign countries and from the northern states modified southern sympathies. Minor battles were fought in the counties north of the River while skirmishes occasionally occurred in the counties south of the River. As in other regions, the war interrupted economic prosperity and checked the growth in population; however, it did not completely devastate this region.

After the war, Reconstruction policies altered the political and social systems. Disenfranchisement of Confederate sympathizers left many of the previously dominant political leaders out of office and out of power. This seriously threatened the usual democratic control over the region, and the political influence this area had wielded over the state. Racist attitudes toward the free slaves forced numerous blacks out of the area. Intimidation and physical violence created an atmosphere of fear and racial tension. The election of 1872 and the granting of voting privileges to adult males brought most of the counties back into the Democratic fold. However, the old politicians never regained the same degree of ability for statewide political manipulation.

### Lagged in Railroad Investment

The impact of the railroads, industrialization, urbanization, and technological innovations affected the economic growth of the area. The ante-bellum economy of the Mid-Missouri Region relied on the Missouri River and its major tributaries for transportation. With the coming of the railroads, steamboats and barges became too expensive in terms of time and efficiency. Area businessmen had tried to induce railroads to lay rails in the

region as early as the 1850s. The War, lack of adequate capital, and a misunderstanding of the importance of trains, prevented serious investment in the railroads. Most saw railroads as a supplementary mode of transportation when the river was ice-jammed; trains would not replace water transportation. By the time this misconception had been disspelled and sufficient financial capital accumulated, Boonville had lost a major railroad line to Sedalia.

Though the economy of the region slowed somewhat, its rate of growth still accelerated. Railroads and trunk lines were built. The economic focus remained primarily on agricultural products and livestock production but the economic base became more diversified as the coal and lead deposits of Cole, Osage, and Moniteau and the abundant supply of high-quality fire clay in Audrain county drew capital their way and were extensively mined. This exploitation of the mineral resources of the area serves to highlight the diversity of economic interests within this region.

### Manufacturing a Population Key Today

The increase in population levelled off in 1910 in Cooper, Howard, Moniteau, and Osage counties. As these counties gradually and consistently lost population, Audrain, Boone, Callaway, and Cole steadily gained. The number of farms has tapered off in all counties while the average farm has increased in acreage and the presence of large corporate farms has become common. In the counties that show continual population growth, one finds the development of new industries and construction of small factories in rural areas. In Boone and Cole counties, government agencies, educational institutions, publishing houses, and insurance companies have stimulated and maintained economic growth. The University of Missouri in Columbia and the State government offices and Lincoln University in Jefferson City provide the major sources of employment in these counties; the once predominant farming interests of this area have yielded their priority. With the 1970 census, all counties, with the exception of Audrain, Cooper and Howard, reflected population increases.

At present, the Mid-Missouri Region is still a section of diverse geographic, social, political and economic interests. This diversity has both aided and hindered the development of the region. Often at odds politically and economically, subregional interests have come into conflict and prevented the fullest degree of cooperation. Yet, the diversity has served to make the region more interesting in its contrasts. In many aspects, it has grown more culturally sophisticated as the result of its many different occupational interests and social values which reflect many of the old South's attitudes while at the same time reflecting an injection of German and Irish cultural traditions.

### **Population**

The population of the Mid-Missouri region experienced steady growth from 1920 to 1970. This growth was reflected in the emergence of *Columbia-Boone County* as a Standard Metropolitan Statistical Area (SMSA) in 1970.

According to the U.S. Bureau of Census, the Mid-Missouri regional population declined from 1900 to 1920, then experienced an upswing that continued through 1970. In 1970, the region recorded its largest population ever with 225,380 persons (See Table P-1).

Table P-1 shows the population trend for each county and the region. The table shows a steady increase in town populations and a steady decline in farm and rural populations (See Figures P-1a and P-1b).

### Town Population Increasing

Town growth is reflected in the fact that every county in the region reached its peak town population in 1970. At the same time, every county recorded its lowest farm population.

Thus, the region followed the national trend of growing towns and declining farm population.

Audrain, Boone, and Cole counties reached their highest total population in 1970. Callaway, Cooper, Howard, and Moniteau counties peaked in 1900. Osage County recorded its largest total population in 1910.

Figures P-1a and P-1b illustrate the trends of urbanrural and farm-non-farm populations. Both figures show the growth of urban areas and towns and the decline of farms, particularly from 1950 to 1970. The loss of farm population resulted mainly from the mechanization and consolidation of farms.

### Peak Rural Population 1890 to 1900

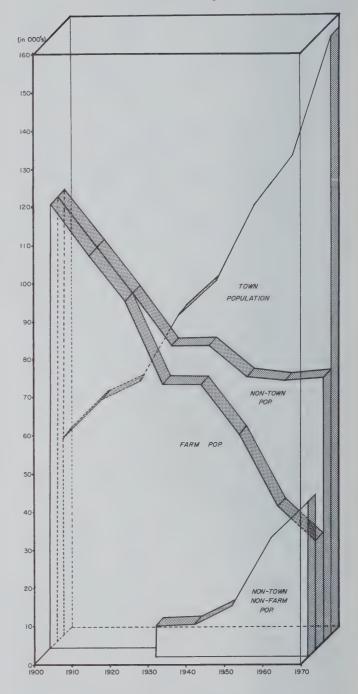

The peak years for farm population in the region were 1890 to 1900, and as late as 1940 there were 69,579 persons residing on farms. By 1970, that figure had dropped to 28,350, a decrease of 59.3 percent.

The percentage of town dwellers in the region passed the 60 percent mark in 1950 and grew to 69.3 percent in 1970 (See Table P-2). Boone County led all counties in the percentage of people living in towns (80.8 percent) and had 41.9 percent of the region's town population in 1970. Osage County had the highest percentage of people living on farms (35.9 percent).

Breakdowns of the population by race and sex are shown in Table P-3. The table shows that white males and females and total males and females reached their peak numbers in 1970, while the non-white male and female population was greatest in 1900.

Mid-Missouri had a larger number of males than females from 1900 to 1960. In 1970, females outnumbered males by more than 4,000.

Figure P-1
POPULATION TRENDS BY PLACE OF RESIDENCE
Mid-Missouri Region

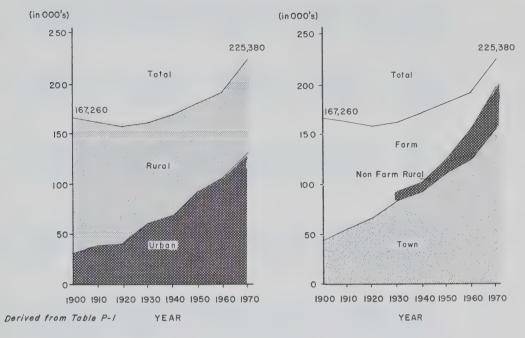

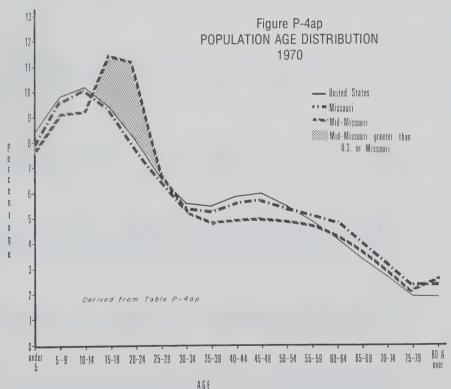

Tables P-4 and P-4ap indicate that the Mid-Missouri region has a higher percentage of its population between the ages of 15 and 29 than either the United States or Missouri. This concentration of young people of childbearing age has a definite effect on the increase in birth rate, and the growth of the population.

More and more young people are staying in college towns after graduation, especially Columbia, and Jefferson City draws a number of young people from across the state with government employment.

Figure P-1a URBAN-RURAL POPULATION TRENDS Mid-Missouri Region

### Figure P-1b POPULATION TRENDS Town, Farm, Non-Town-Non-Farm

Historical development of the population by minor civil divisions from 1900 to 1970 for each county is given in Table P-5.

Future population growth is likely in the region as more industry moves into the area and the larger cities continue to attract young people of childbearing age. Table P-4ap also shows that the regional percentages of older persons in age brackets over 60 run slightly above the U.S. figures, but below the state marks.

Table P-4p shows the percentage of the state's population residing in the Mid-Missouri region by age, race, and sex.

Source: U.S. Bureau of Census. Census of Population, 1900-1970.

<sup>\*</sup>South Fork Township was formed in 1970 and includes Vandiver Village (formerly part of Salt River Township) and part of Mexico City.

\*\*The total population of Mexico City in 1970 was 11,807.

<sup>\*\*\*\*</sup>The total population of Columbia City in 1950 was 31,974; in 1960 was 36,650; and in 1970 was 58,804.

Prior to 1970 census, part of Cedar township annexed by Ashland town. Parts of Columbia township transferred to Missouri and Rocky Fork townships. Parts of Columbia and Missouri townships annexed by Columbia City.

<sup>\*</sup>North and South Moniteau Townships combined to form Moniteau Township in 1920.

<sup>\*\*</sup>Part of Crawford Township annexed to Linn City.
Meta Town changed to city since 1950.

Westphalia Town changed to city since 1950.
\*\*\*\* Part of Crawford Township annexed by Linn City.
Part of Jackson Township annexed by Meta City,
and parts of Jackson and Mashington Townships
annexed by Argyle Town.
Part of Jefferson Township annexed by Belle Town.
Freeburg Town changed to village since 1960.

### **Vital Statistics**

Tables VS-1, VS-2, and VS-3 indicate the number of births, deaths, and the difference between births and deaths. Table VS-4, using birth and death information along with census counts, reflects the increase or decrease of the region's population by migration.

The Mid-Missouri region experienced its largest number of births in 1959 with a total of 4,245 births. That same year, white births reached their peak. Regional non-white births peaked in 1962. (Table VS-1)

Deaths were first recorded in 1911. Regional deaths reached their peak in 1970. That same year, three of the eight counties reached their all-time high number of deaths. (Table VS-2)

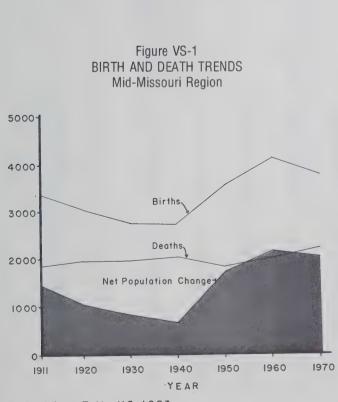

Growth in the region is indicated by Table VS-3, which reflects the net population change. The region experienced a positive net change (more births than deaths) every year after 1911. The largest net change occurred in 1959 when births exceeded deaths by 2,404.

Figure VS-1 illustrates the trend in births, deaths, and population change from 1911 to 1970.

Table and Figure VS-4 reflect migration patterns in the region. An inmigration took place during 1930-1939 when 4,162 persons migrated into the region. During the next two decades, outmigration occurred. 584 persons left the region from 1940 to 1949 and the number grew to 7,472 during the 1950-1959 period.

A major reversal occurred in migration between 1960 and 1969 when 14,048 persons migrated into the region. Students were counted as residents for the first time in the 1970 census and, as a result, Boone County recorded an inmigration of 16,816 persons. However, not all of the inmigration was due to students. During the 1960-69 period, Boone County and the city of Columbia experienced real growth. This large inmigration was offset by losses in Audrain, Cooper, Howard, and Osage Counties.

### **Household Characteristics**

All available data on household characteristics for the period 1940 through 1970 have been included in Table Ho-1 for counties, region, and the state. Comparisons between areas are shown in Figures Ho-1a, 1b, 1c, and 1d.

In 1940, the population per household in the Mid-Missouri region was 3.34 persons. By 1970, this figure had fallen to 2.96 persons per household, just slightly below the State figure of 2.98 persons and considerably below the U.S. figure of 3.17. (See Figure Ho-1a.)

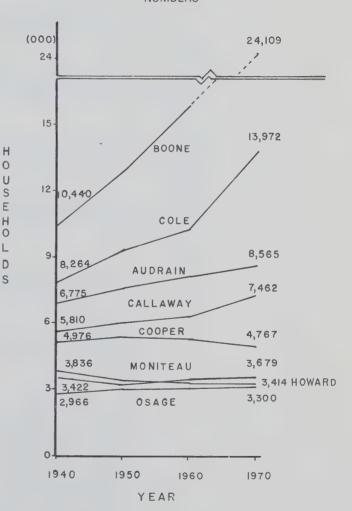

The regional population increased 31.8 percent from 1940 to 1970. At the same time, the number of households in the region increased by 48.8 percent. Figure Ho-1b illustrates the trends in types of households. While husband-wife households grew 24.3 percent from 1940 to 1970, other types of households grew 70 percent. The major growth in other types of households can be attributed mainly to the increase of young singles in the region.

Figure Ho-1c shows the trends in the number of households for each county. With the exception of Cooper and Howard counties, every county experienced a growth in the number of households. Boone County had the largest increase in number of households from 1940 to 1970 with 129.8 percent.

Mid-Missouri was well above both the State and Nation in home ownership in 1940 with 51.5 percent of the households owner-occupied. By 1970, the region was still above the State and National percentages. A comparison of the region with the State and U.S. in home ownership is shown in Figure Ho-1d.

The region had a median number of rooms of 4.0 in 1950 compared to 4.3 for the State. In 1970, the regional figure had risen to 5.0, slightly above the state mark of 4.8. Cole County experienced the greatest growth in median number of rooms with an increase from 4.2 rooms in 1950 to 5.3 in 1970.

### Education

The Mid-Missouri region is literally the hub of education in the state.

Jefferson City, in Cole County, houses the Missouri State Department of Education offices and Columbia, in Boone County, is the location of the main campus of the University of Missouri and the office building of the university-wide administrative staff. The head office of the Missouri State Teachers Association is also located in Columbia.

Educational facilities abound in the region with eighty elementary schools, nine junior high schools, thirty-three high schools, seven four-year colleges and universities, two military schools (one with junior college accreditation), and a large technical college.

In 1900, the region contained 672 school districts. As shown in Figure Ed-1a, a major drop in the number of school districts occurred between 1950 and 1960. Three hundred and eighty school districts existed in

1950, but the number had decreased to 135 by 1960. There were 46 school districts in the region during the 1971-72 school year.

According to the Missouri State Department of Education, total enrollment for the 1971-72 year for the region was 46,771 students. This figure includes all grades, kindergarten to twelfth grade, and represents 20.8 percent of the total regional population.

Table Ed-1 gives detailed information on school enrollment and a breakdown of enrollment by school districts for the 1971-72 school year.

The thirteen largest school districts enrolled 36,300 pupils or 77.6 percent of the total regional enrollment. The 13 smallest districts enrolled 1,180 pupils or 2.5 percent.

Howard and Osage counties have three districts each, Audrain and Cole have five districts, and Moniteau and Cooper counties each have six. Callaway County contains eight school districts, and Boone County has ten.

Figure Ed-1 shows the location as well as the total enrollment for each school district.

There were 3,076 seniors in the school system during the 1971-72 school year. This means approximately this number of young people annually enter the local labor supply each spring, enter college or military service, or leave the area to attend college or look for jobs elsewhere.

Because of the proximity of a number of colleges and universities, fewer young people leave this region than other regions to attend college.

Another way of showing the educational levels attained in the region is by the median school years completed, by sex, for 1940, 1950, 1960, and 1970.

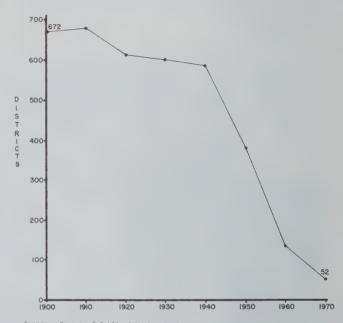

Table Ed-2 shows that females in the Mid-Missouri region had attained an 11.9 median of school years by 1970, compared with 8.6 years in 1940. Males rose from 7.8 median school years completed in 1940 to 11.5 years in 1970.

The high level of median school years completed in the region is due, in part, to the large number of colleges and universities found within the region. It should be noted that Boone County residents, both male and female, had the highest median school years completed in the state in 1970. Boone County still had 11,195 persons age 25 or over in 1970 who had not completed high school. The region had 53,396 persons age 25 or over in 1970 who had not completed high school.

Besides the colleges and universities, the region had two renowned military schools: Kemper Military School and College in Boonville, and Missouri Military Academy in Mexico.

With Linn Technical College in Linn, and a number of area vocational-technical schools, the educational picture in the area is well-rounded and offers good educational opportunities for the future.

### Agriculture

The Mid-Missouri region is geographically characterized by its diversity. Its topography runs from nearly-level plains to gently rolling hills to steep banks and cliffs near the Missouri River. The soil makeup of the area is equally diverse and runs the spectrum from stony, unproductive hill country to the rich, fertile soils of the Missouri River flood plain.

The present land ownership pattern varies from large, commercial farms to small non-commercial holdings. The trend is toward consolidation of small farms into large, commercial enterprises.

In 1969, the average farm size for the state was 232 acres; for Mid-Missouri it was 240 acres. Table Ag-1 shows that the total number of farms in the region decreased 27.9 percent from 1954 to 1969. The loss occurred in farms under 260 acres, which declined 36.7 percent. At the same time, the number of farms 260 acres and over increased 3.9 percent. All of the increase in the number of large farms took place in farms 500 acres or larger. Here again is a reflection of the trend toward larger, more profitable farms.

It should be noted that there was an increase in the number of very small farms in the region from 1964 to 1969. During that time, a 74.4 percent increase occurred in farms under ten acres in size. Apparently, some city dwellers are buying small farms outside city limits for home-building sites, small non-commercial farming efforts, and for investment purposes. This trend adds some impetus to the growing non-town, non-farm population

since many of the smaller holdings are not used for commercial purposes.

Figure Lu-1 illustrates land use in the region from 1930-1970. Total land in farms declined from 1954,

Figure Lu-1 LAND USE Mid-Missouri Region 1930-1970

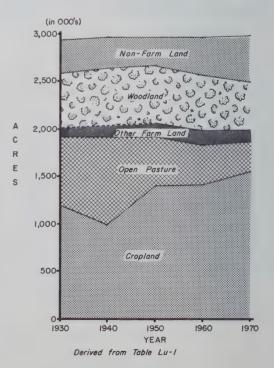

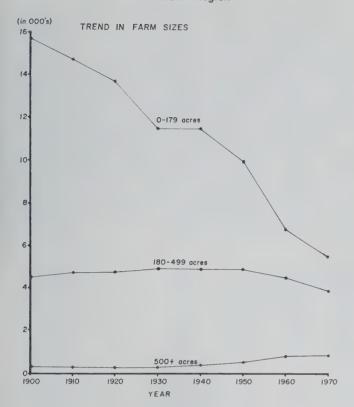

Figure Ag-1a TREND IN FARM SIZE Mid-Missouri Region

when it made up 90 percent of the total land area, to 1969, when it amounted to 83.7 percent. Total cropland made up 50.4 percent of total farmland in 1954. By 1969, total cropland made up 62.3 percent of all farmland. (See Tables Lu-1 and Lu-1p).

Mid-Missouri's farm population shrank from 40.7 percent of the region's total population in 1940 to 12.6 percent in 1970. This decline is due mainly to the consolidation and mechanization of farms which displaced small farmers and farm laborers in large numbers. There were 20,462 farms in the region in 1900 but only 10,407 remained in 1970.

As the area became more diversified, the amount of land in farms decreased. However, the number of acres in cropland steadily increased from 1954 to 1969. The increase amounted to over 200,000 acres or an increase of 15.2 percent. Table Ag-2 shows the crops harvested in the region by number of acres.

Despite the increasing growth and prominence of urban areas, agriculture continues to play a major role in the economy of the region. Table Ag-3 shows the value of farm products sold in the region. Although the value of crops sold diminished somewhat from 1959 to 1969, the value of livestock and poultry sold for the same period increased dramatically. In fact, the value of livestock sold increased 73.1 percent from 1959 to 1969 for an increase of over forty-one million dollars.

Figure Ag-1b
TREND IN AVERAGE SIZE OF FARMS
Mid-Missouri Region

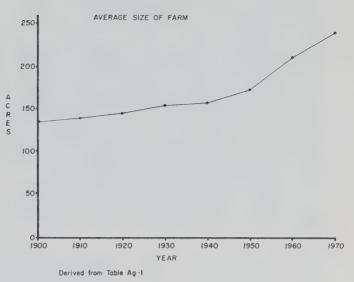

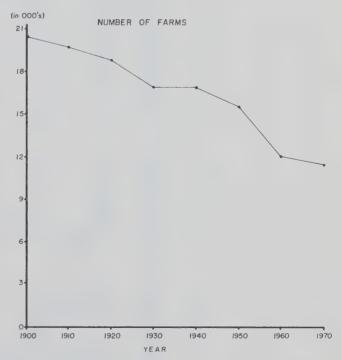

Figure Ag-1c TREND IN NUMBER OF FARMS Mid-Missouri Region

The value of the region's livestock sold represented slightly over nine percent of the State total in 1969 while making up eight percent of the State total in the value of *all* farm products sold.

The region had an average value of all farm products sold per farm of \$11,292. This is compared with the State average of \$10,657.

Table Ag-4 and Figure Ag-4 illustrate the number of mature animals on farms converted to animal units. The number of cattle in the region grew from 178,018 in 1940 to 400,618 in 1970, an increase of 125 percent. Horses, sheep, and poultry numbers have declined steadily since 1930.

The number of farm operators who work off their farms compared to the total number of farm operators greatly increased from 1949 to 1969.

As shown in Table Em-4, 38.2 percent of all farm operators worked off their farms in 1949. By 1969, the figure had grown to 62.3 percent. The total number of farm operators has declined every census year since 1949, as did the number of farms. However, the number of operators working off their farms increased every period.

In 1969, all eight counties in the region showed over 50 percent of their farm operators working off their farms. Boone County had the highest percentage with 75.5

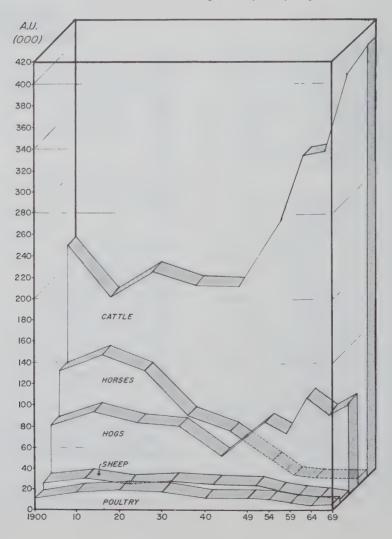

percent.

Number of farm operators working off their farms 100 days or more also increased considerably. In 1949, only 24 percent of all farm operators worked off their farms 100 days or more. By 1969, the figure had increased to 46.7 percent. The State percentage was 20.5 percent in 1949 and 40.6 percent in 1969. The U.S. showed 23.3 percent in 1949 and 34.2 percent in 1969.

It is obvious that off-farm employment is growing at a faster rate in the Mid-Missouri region than in the State or the U.S. A large contributing factor is the availability of jobs in nearby growing towns. As Table Em-4 shows, the largest percentages of operators working off their farms are in Boone, Callaway, and Cole counties. These counties contain Columbia, Fulton, and Jefferson City, three of the largest, fastest-growing cities in the region. Thus, their growth provides the most employment opportunities for farm operators.

### Business, Industry, and Employment

### **BUSINESS TRENDS**

When the Mid-Missouri region was first settled, agriculture was the mainstay of the economy. Small towns soon sprang up to provide the early supportive businesses such as banks, feed and grain stores, and general merchandisers. As the years passed, some of the towns grew, as did the number and types of businesses.

Today, the region has many retail, wholesale, and service businesses, and some light industry. But with the exception of refractories at Mexico, Farber, Vandalia, and Fulton and A.B. Chance Company of Centralia, the area has no heavy manufacturing industry.

Table Ec-1 shows the number of business units by type of business for the eight counties and the region from 1947 to 1970. Historically, Boone County had the largest number of businesses for the period. It must be considered that although the number of establishments is important, the size of the establishments is equally important. The number of employees and the sizes of the payrolls are significant factors in determining the impact of a business on the area.

Figure Ec-1 illustrates the trend of business units. It shows that the number of all business units steadily increased from 1947 to 1970.

Taxable payrolls by types of business are shown in Table Tx-1 for the years 1947 to 1970. A comparison of

Table Tx-1 and Table Ec-1 will reveal the importance of the size of business units rather than the number of units.

For example, in 1970, Callaway County had 18 manufacturing units with payrolls totaling \$1,787,000. Moniteau County had two more manufacturing units but only \$1,357,000 in payrolls.

### TRENDS IN EMPLOYMENT

The total labor force in the region decreased during the depression of the 1930s. But from 1940 to 1970, the labor force in the region steadily increased. (See Table Em-1 and Figure Em-1).

Table Em-3 shows the number of paid employees engaged in the different categories of work. Figure Em-3 shows employment in retail trade, wholesale trade, and manufacturing increased at a faster rate in the region than in either the U.S. or Missouri. Selected Services increased from 1958 to 1967, but at a slower rate than in the State or U.S. The employment trend in agriculture shows that the number of paid agricultural employees in the region decreased 20.4 percent while the U.S. number decreased 10.5 percent and the State number declined 23.9 percent.

Thus, the region's growth is illustrated by economic growth as well as population growth. This is shown by the increase in business units, payrolls, and employees.

Table Em-2 shows all available data on occupations for the years 1930 to 1970 for individual counties and the region.

Figure Em-2a shows the trend of employment for males and females from 1930 to 1970. There was a steady increase in female employment from 1930 to 1970. The largest increase occurred between 1960 and 1970 when it rose 48 percent.

Male employment in the region fluctuated between 1930 and 1970, but reached its peak in 1970. During the period, male employment made its largest gains in retail trade, selected services, and finance, insurance, and real estate. The biggest decline in male employment occurred in agriculture.

Retail Trade. The Mid-Missouri region once again reflected its growth in the increasing number of retail employees. From 1958 to 1967, the number of paid retail employees in the area increased 22.6 percent.

Wholesale Trade. This category showed a larger percentage increase in employees in the region than any other category. Total paid wholesale employees increased 53 percent from 1958 to 1967. Although Cooper, Moniteau, and Osage counties experienced a decline, the other five counties had dramatic increases.

Selected Services. Nationally, this category is the fastest growing sector in employment with a 32.2 percent increase between 1958 and 1967. Missouri gained 25.2 percent. Although falling below both the State and U.S. figures, the region showed an increase in selected services employment of 17.9 percent.

Agriculture. The number of paid agricultural employees in the region declined 20.4 percent from 1959 to 1969. The Missouri and U.S. trends showed declines of 23.9 percent and 10.5 percent respectively.

Manufacturing. Regional manufacturing employment increased 31.2 percent (3,004 jobs) between 1958 and 1967. This increase is somewhat above the increases shown by the State and Nation (See Table and Figure Em-3). This is the only employment category that experienced an increase in every county from 1958 to 1967.

Table Em-6 shows the number of people in the labor force in each county, the number unemployed, and the unemployed as a percentage of the total work force.

1940 was the worst year for unemployment in the region when 5.7 percent of the total labor force was out of work, but the State had 14.7 percent unemployed and the U.S. had 14.6 percent unemployed. In 1970, the regional figure was 2.5 percent unemployed.

In 1970, unemployment ranged from 2.1 percent in Cooper County to 5.2 percent in Moniteau. The 2.5 percent unemployment figure for the region contrasts with 4.6 for the State and 4.3 for the U.S. Since 1940, regional unemployment has stayed well below both the State and national unemployment figures.

More than 2,300 persons were unemployed in the Mid-Missouri region in 1970. Of those unemployed, approximately 51 percent were men and 49 percent were women (See Table Em-6).

### **Income Trends**

Table and Figure In-3 show per capita, mean family, and median family income figures for Mid-Missouri from 1950 to 1970. Comparable figures for Missouri and the United States are also shown.

The calculated mean or average family income shown in Table In-3 and Figure In-3 was somewhat below the State and National figures. The same was also true for per capita and median family income.

Table In-3 shows that Cole County had the highest per capita, mean, and median family income of the eight counties in 1970, while Howard County had the lowest per capita income and Moniteau County had the lowest mean and median family income.

Through the cooperation of the Missouri Department of Revenue, Table In-4 was prepared for the years 1962 to 1971. In this ten-year period the gross income, as measured by state income tax returns in the region, increased by \$339,640,997 or 131 percent.

Table In-4 shows the adjusted gross income, number of returns, and the average income per return for the eight counties and the region. All three categories for the region showed a steady increase. As mentioned, adjusted gross income increased 131 percent, while the number of returns rose 67.7 percent and the average income per return went up 37.8 percent. (See Figure In-4).

Another major source of income in the region is the state-administered welfare program. Table W-1 shows the amount of welfare dollars spent and the number of recipients in each of the counties and the region from 1950 to 1970.

In 1950, the region's welfare payments amounted to almost three and one-half million dollars, or 3.7 percent of the State total. In 1970, regional welfare payments were slightly more than seven and one-half million dollars, or 3.2 percent of the State total. Welfare payments in the region increased by 119 percent over the 20-year period.

Thus, while there was an increase in welfare dollars spent in the region from 1950 to 1970, the regional expenditure as a percent of the total State payments decreased. This seeming paradox is explained by the fact that total State welfare payments went up 150.6 percent in the 20-year period.

Figure W-1 shows the amount of welfare dollars spent in the region from 1950 to 1970 and the number of welfare recipients for the same period.

# Transportation, Communications, and Utilities

#### Transportation

Transportation plays a major role in the social and economic growth of the Mid-Missouri region. Airports, railroads, the Missouri River, and the myriad highways combine to create a transportation network that not only aids passenger travel to and from the area but also is instrumental in the shipping and receiving of industry's products.

*River Shipping:* Barge lines serve the Missouri River and docking facilities are available at Jefferson City. (See Figure T-1)

Railroads: Six major railroads serve the Mid-Missouri region: The Illinois Central Gulf, Missouri-Kansas-Texas, Norfolk and Western, Burlington Northern, Chicago, Rock Island, and Pacific, and Missouri Pacific railroads provide rail shipping to the area.

Figure T-2 illustrates the rail network that serves Mid-Missouri.

Highways: The Mid-Missouri area had 2,234.3 miles of state maintained roads as of December 31, 1972. Figures T-3 and T-4 indicate the major and supplemental highways through the region. Major north-south arteries traverse the central section and eastern side of the region. U.S. Highway 63 runs through the central part of the region, entering northern Boone County, running through Columbia and Jefferson City, then exiting at the southern Osage County line. U.S. Highway 54 is actually an east-west highway, but runs north-south through the

Mid-Missouri region. It enters the region in northeast Audrain County, runs through Mexico, Fulton, and Jefferson City, then exits the area at the southern Cole County line.

Interstate 70 (U.S. Highway 40) and U.S. Highway 50 cross the region from east to west. I-70 enters the east side of Callaway County, runs through Columbia, Boonville, and the central part of the region, and exits through the western side of Cooper County. U.S. Highway 50 comes in the eastern side of Osage County, crosses the southern part of the region through Jefferson City and California, then leaves the area at the southwest corner of Cooper County.

Besides those already mentioned, the region has a network of concrete and asphalt roads under state and county maintenance which serve the entire area.

Numerous motor freight lines provide shipping services for the whole region.

Airports: There are nine public-use airports in the region and a number of smaller private or restricted use airports. Columbia Regional Airport is the largest airport in the area with fixed-base operations, all-weather runways, and scheduled passenger service. Jefferson City, Fulton, Mexico, and Columbia have airports with hard-surface runways and flight maintenance facilities. They also handle air freight shipping service. Jefferson City Airport also provides scheduled passenger service.

#### Utilities

Figure T-5 indicates the electric transmission line network developed to serve the needs of industry and cities throughout the region.

A natural gas distribution system supplements the

electrical power. Missouri Power and Light Company, Gas Service Company, and Missouri Utilities Company are the major gas suppliers in Mid-Missouri. Some communities operate a municipal distribution system. (See Figure T-6.)

Figure T-5
MAJOR ELECTRIC TRANSMISSION LINES
Mid-Missouri Region 1970

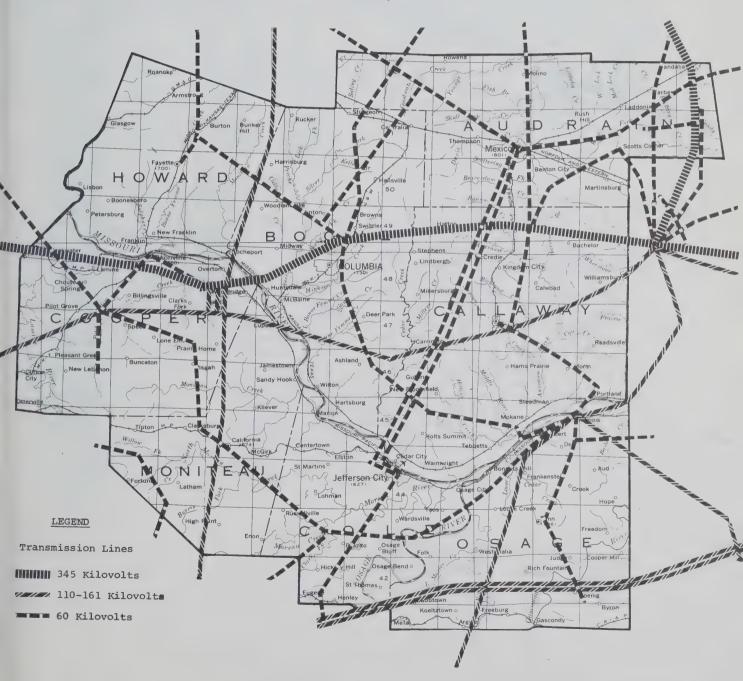

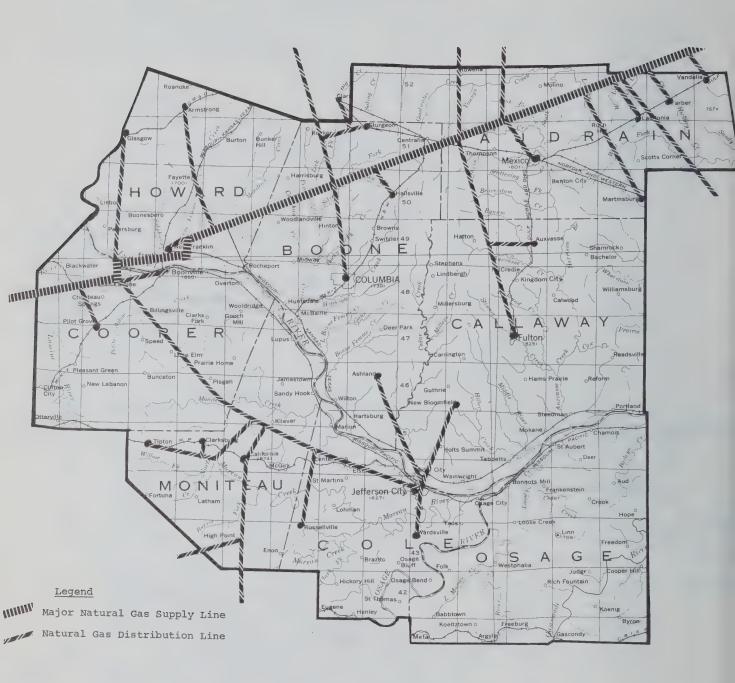

Figure T-6
MAJOR NATURAL GAS PIPE LINES
Mid-Missouri Region 1970

#### Communications

Telephone: A number of telephone companies provide phone service in the region. General, Mid-Missouri, Mid-State, Southwestern Bell, and United Telephone companies serve large portions of the region. Continental, Eastern Missouri, and Kingdom Telephone companies serve smaller, more specific areas. Jefferson City and its surrounding areas have Capital City Telephone Company service.

Newspapers: Twenty-one newspapers are published in the eight-county region. Of those, thirteen are published weekly and eight are daily papers.

# **Local Government** Services

According to the 1967 Census of Government, Missouri was one of the leading states in number of local government units (2,917). This was a 22 percent decrease from the 1962 figure of 3,742.

Missouri's number of local government units is illustrated by the fact that the State ranked sixth in number of municipalities, ninth in school districts, and eleventh in the number of special districts in 1967.

Like the State trend, the number of local government units declined in Mid-Missouri from 345 in 1957 to 207 in 1967. (See Table GA-1.) This is a decline of 40 percent. Figure GA-1 illustrates the decrease of local government units from 1957 to 1967.

#### High Proportion of Government Employment

Table GA-1 also gives available information on the number of elected officials and the number of government employees. As might be expected, with the state capital, several state-operated universities, and other governmental operations in the region, government employment in Mid-Missouri is exceptionally high. In 1967, the total number of government employees, including state, county, and local governments, amounted to 22,431 or almost ten percent of the region's population.

Counties are classified into four categories based upon the assessed valuation of property: Class I-\$300 million and up; Class II—\$70 million to \$300 million; Class IV—\$10 million to \$70 million; and Class IV below \$10 million. This system is used to set salaries of county officials and to authorize certain county level offices. Boone County is a Class II county and the other seven are Class III counties.

#### Big Reduction in School Districts

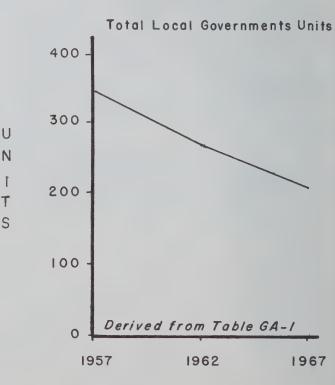

Mid-Missouri had 46 school districts during the 1971-72 school year. This is a considerable drop from 588 school districts which existed in 1940. Figure Ed-1a shows the decline in the number of school districts in the region.

The region experienced an increase in the number of non-school special districts from 1957 to 1967. The number of special districts has increased primarily to

facilitate the establishment of rural water and sewer systems.

In Missouri there were close to 1,000 special districts handling a variety of problems in 1967. In the Mid-Missouri region there were 74 special districts dealing with problems from fire protection and water distribution to road construction and maintenance.

## **Health Facilities**

Mid-Missourians have, located in their area, almost all modern health facilities and services. They also have the advantage of quick accessibility to these services. With only a few exceptions, everyone can reach a good hospital with a modern, well-staffed emergency room within one half hour of their home. There are physicians representing all major specialties and most of the less-called-upon specialties. Pharmacies are located in all but one of the Class 5 Growth Center areas (see Figure HS-1), making them available within one-half hour to about 95 percent of the people in the region. The supply of nursing homes is adequate. They are well distributed within the region, with only one Class 5 Growth Center lacking one. The population-to-physician ratio, an asset discussed later, is one of the highest in the 20 RPC's of Missouri.

#### Hospitals

The first medical information a person usually checks in an area is the location of a hospital. There are nine hospitals supplying general medical services in Mid-Missouri (see Table HS-1 and Figure HS-1), with one more under construction in Columbia and expansion taking place at several others. Cumulatively, they have 1,542 short-term care beds which is a ratio of 6.8 beds for every 1,000 persons. Short-term, as it is used here, means beds which are available for hospital stays averag-

ing less than 30 days. The U.S. average is 4.2 beds per 1,000 persons so Mid-Missouri is relatively well-provided. This ratio represents a medical service base which should be able to handle comfortably all normal cases with some leeway for seasonal heavy loads and disasters. There are an additional 172 beds in the area which are considered long-term care.

In addition to the general hospitals, several specialty hospitals are available. Two state mental hospitals, the state cancer hospital, and a Veteran's Administration hospital are all located in this region. The University of Missouri Medical Center, which houses medical and nursing schools, is one of the state referral centers. All of these additional specialties enhance the general status of medical care.

#### **Nursing Homes**

Another necessary medical support facility is the nursing home. Mid-Missouri has 28 licensed nursing homes with a total of 1,320 beds. An additional 60-bed home is under construction in Columbia. (See Table HS-3 and Figure HS-1.) All but one offer at least practical nursing care. Two homes (a total of 261 beds) are categorized as professional. This means the services of a physician are available as well as a full-time registered nursing staff. National studies designed to determine

adequacy of numbers of beds have indicated that approximately 4 percent of the age 65 and over population can be expected to need nursing home care at any one point in time. Applying this percentage to this re-

gion, a reasonable bed need would be about 1,000. This means Mid-Missouri has over 300 beds to handle variations from the average, a figure which should be adequate for the present.

#### Table HS-1 HOSPITALS IN THE MID-MISSOURI REGION

#### **Pharmacies**

Another health related service of concern to a patient is a pharmacy. With the exception of Osage County, which is void of pharmacies, each county in this region is served by at least two pharmacies. There are a total of 61 in the region. (See Table HS-2)

#### Physician Manpower

According to a 1972 survey by the Missouri Division of Health, there are 493 physicians actively practicing in the Mid-Missouri Region: 432 are M.D.'s and 61

are D.O.'s (See Figure HS-2). This represents a population-to-physician ratio of 457. This ratio is a common measurement which simply shows the average number of persons to be cared for by each physician. The State as a whole has a ratio of 892 persons per physician, so this region has a relatively abundant supply of physicians. As can be seen in Figure HS-2, a large number are necessarily located in Columbia, serving the six hospitals located in this community. The rest of the region's physicians are well distributed geographically, with all of the Class 5 Growth Center areas having at least one physician.

Note: During the process of publication, a new nursing home opened in Glasgow (Howard County). The new home, Colonial Manors, is a 59-bed professional nursing home. This information is not included in any of the tables or text.

### Recreation

As leisure time grows more abundant, recreational areas and activities take on increasing importance. The Mid-Missouri region offers many sites and activities for recreational purposes.

Fishermen and hunters can enjoy three wildlife areas operated by the Missouri Department of Conservation. The largest is the Rudolph Bennitt Wildlife Area which covers 3,364 acres and is located at the junction of Boone, Howard, and Randolph counties. Also located in Howard County is the 274-acre Hungry Mother Wildlife Area. The Marshall I. Diggs Wildlife Area has a total of 853 acres and is located near Martinsburg in Audrain County.

Rock Bridge Memorial State Park is seven miles south of Columbia in Boone County. The park features geological formations including a natural rock bridge for which the park is named. Facilities at the park include a picnic area, a playground, a ball field, and nature trails.

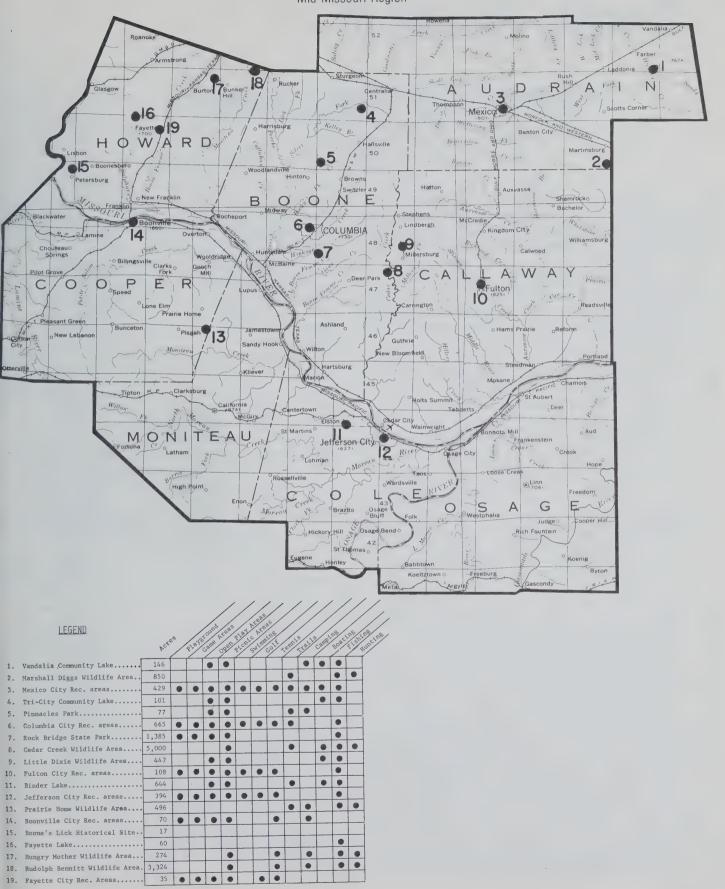

Boone's Lick State Historical Site marks the spot where two of Daniel Boone's sons manufactured salt in Missouri in 1805. The site is located in Howard County about nineteen miles northwest of Boonville.

Other places of interest in the Mid-Missouri region include the State Capital at Jefferson City with its museum and historic governor's mansion and the Winston Churchill Memorial and Christopher Wren Church at Fulton.

Many of the cities in the region have city or community parks or recreational areas. Besides those already mentioned, the region also has a number of lakes and wildlife areas available for recreational activities. Little Dixie Lake near Millersburg is widely used by fishermen.

Figure R-1 shows the location of major recreation areas in the region. Also shown are the sizes of the areas and the activities available.

Figure R-1 RECREATIONAL AREAS Mid-Missouri Region

# **Changing Patterns of**

# **Community Development**

The Mid-Missouri Region reached a population peak between 1890 and 1900 and then began a slow decline as mechanization hit the farm. Both size of farm families and number of farm families declined. Sometime between 1920 and 1930 the population of the area began to level off. The area attracted some industry and there was expansion in number of government jobs. Cooper, Howard, Moniteau and Osage counties, however, continued to lose population through 1960. In the decade of the sixties, Moniteau and Osage stopped declining and gained from 1.2 to 2.3 percent. Audrain County, however, which had gained from 1920 through 1960, showed a -2.7 percent drop in population by 1970.

The total population of the region in 1970 was 225,380, an increase over 1900 numbers of 34 percent. During this period, however, the non-white population declined from 21,256 to 12,587 in 1950 but was back up to 14,160 in 1970.

As the farms were consolidated, farm families continued to leave the rural area but they often settled in Columbia, Jefferson City, Fulton or Mexico until 1940. From 1940 through 1960 there was a net out migration but the surplus of births over deaths continued to increase the total population. Between 1960 and 1970 there was net in-migration of 14,048 persons. The greatest number of births in the region occurred in 1959 and the most deaths occurred in 1970. There is still a surplus of births over deaths of approximately 1,200 per year but this is only one-half the surplus of 1959.

The 20,462 separate farms in 1900 had declined to 10,407 units by 1969. The adjustment in farms appear to be nearly over and three of the counties actually showed an increase between 1964 and 1969.

A rapid growth of Selected Service jobs combined with the leveling of farm population has provided opportunities for many of the high school graduates who formerly left the area to remain in service positions and to continue their education in the area's colleges. The lure of the big cities is a little more tarnished and Mid-Missouri has more appeal to its own young people. If jobs in industry, retailing, wholesaling and service and repair categories continue to increase, the population of the area should remain one of healthy growth comparable to the national trend. The rate of growth of Columbia may be

expected to slow down but still continue an upward trend. Many of the smaller towns of the region should gain significant numbers of people who prefer commuting to jobs while living in small towns.

If area communities continue to try to locate industries they may keep even greater numbers of their young people in the region in the years ahead. The completion of the Union Electric Atomic Energy plant in Callaway County should be a powerful attraction to industry in the next decade.

The growth of jobs in industry and commerce will require expansion of technical school facilities in the region to provide job training. A good start has already been made in this direction in recent years.

A growing population for the area as a whole will revitalize many of the smaller communities that have suffered from the decline of farm population. Improved schools, expanded leisure time outlets and cultural programs will be demanded if the area is to continue to improve its position.

With a little more growth in population it is logical to expect a major department store chain to enter this region and further growth of air transportation and a revitalized rail-passenger service are also to be expected. A real need for bus transportation within the region already exists and should find resolution in the next decade.

The Class 5 growth centers (those serving approximate radius of 8-16 miles) are basically all in good shape and improving. Some additional medical facilities are needed at this level but it is in much better shape than many areas. A need exists for more cooperation between cities and less intense competition among a few of the larger towns.

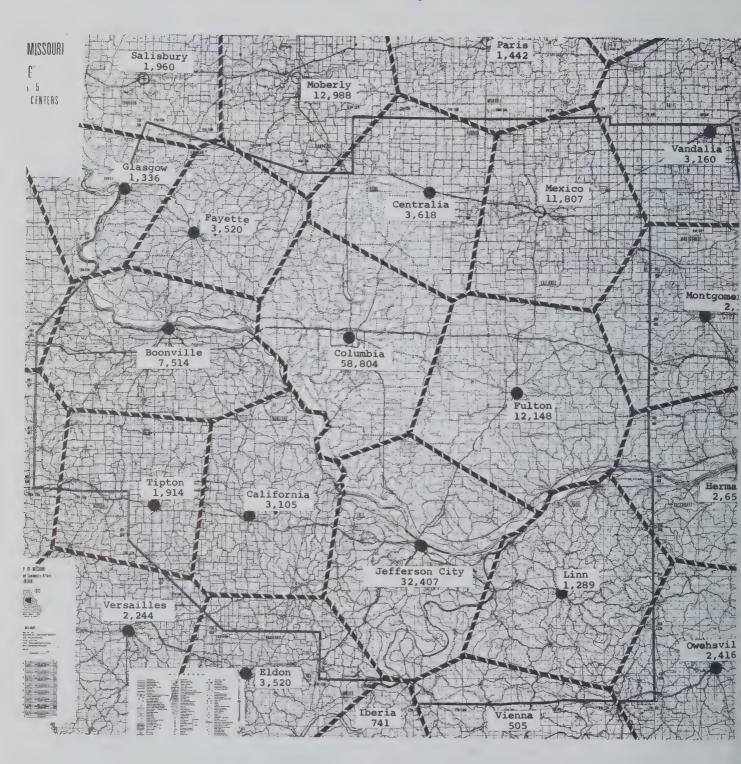

Renewed vigor and growth may be expected in most of the Class 4 growth centers by the end of this decade. Incorporation may be in order for Millersburg, Williamsburg and Portland to cope with problems attendant to construction of the atomic energy plant in Callaway County.

A generally healthy future appears to be ahead for this region with growth fairly well distributed throughout the region.

# Summary

When an area has experienced a rebirth and sectors of rapid growth there may be a tendency to coast on past accomplishments. The Mid-Missouri region has many good features - but a word of caution is due. Much of the rebirth and growth of the area has been related to the great expansion of higher education since World War II and the acceleration of medical facilities around a teaching hospital at Columbia and its companion Veterans Administration Hospital.

The development of an atomic energy electric generation plant will provide an infusion during the construction period but may lead to sudden decline in some communities after it is completed. A vigorous effort to ameliorate the loss of construction jobs will be needed and should be timed to attract new electric consuming industries.

Greatness lies ahead for this region - if it can protect its environment and communities from get rich quick developments. It has attained sufficient size to be attractive to outsiders. The question remains to be answered, will it be selective of new developments to keep it an attractive, healthy place to live?
